components) and programmable logic controllers. The first is used pri-marly in cases, where any reprogramming by the user is out of the question and the job size warrants the development of a special control-ler. Typical applications for such controllers can be found in automatic washing machines, video cameras, and cars.

8.2.2 The Logic Scan Ladder logic programs are modeled after relay logic. In relay logic each element in the ladder will switch as quickly as possible. But in a program elements can only be examined one at a time in a fixed sequence. Consider the ladder logic in Figure 8.4, the ladder logic will be interpreted left-to-right, top-to-bottom. In
